Emergency Rescue Mat

Life Safety and Rescue Solutions

At Wormald, our goal is to protect people and property. Wormald have been leaders in fire protection for over a 120 years, providing equipment and advanced technology to all types of industries. Our Life Safety and Rescue solutions continues that tradition with a range of equipment specifically engineered to help rescue personnel perform their life saving tasks.

Moving injured people safely and easily

Extracting injured people from hard to access places is often a challenge for fire fighters, miners and other rescue personnel. The Emergency Rescue Mat can simplify this task. In hospitals and nursing homes, the Emergency Rescue Mat is a safe and convenient way to evacuate non-ambulant patients.

Rescuers can move an injured person quickly and efficiently with the Emergency Rescue Mat. The simple yet thoughtful design minimises fatigue and the risk of injury to rescue personnel. Its lightweight and convenient size means the Emergency Rescue Mat is highly portable – ideal for rescue operations.

The Emergency Rescue Mat is made from lightweight, tear resistant laminated fabric that has had ultra violet and fire retardant treatments. It has nine carry handles, stitched across the entire width of the mat, to allow flexibility in carry positions. The casualty can be strapped to the mat; a foot pocket prevents sliding on slopes and stairs. In reduced light situations a reflective strip helps rescue crews orient the mat.

The Emergency Rescue Mat comes in a storage bag for convenient storage and transport.

Fact: Minimises fatigue and the risk of injury to rescue personnel

Rescue Mat Dimensions

Length:	2030mm
Width:	840mm
Foot Pocket:	200mm x 200mm x 300mm
Carry handles:	Red webbing
Casualty Strap:	Fluorescent yellow webbing
Maximum Safe Load Capacity:	182kg

Carry Bag Dimensions

Length:	350mm
Width:	150mm diameter
