# TURK Trolley

*Fact: With the TURK trolley, one person can do the work of four.*

## Simple ideas are often the best

Rescue teams often have to carry equipment significant distances between their response vehicle and the emergency scene. This equipment can weigh more than 100 kgs, requiring up to four team members for transport, and fatiguing them before they start rescue operations.

The Turnell Universal Rescue Kart (TURK) is a two-wheel kart that allows one person to transport equipment. A rescue/equipment basket can be used with the TURK. The weight of the basket binds with the TURK - no straps or time wasting procedures are required. The TURK can also be used to transport decontamination equipment, to carry a ladder loaded with equipment, or just about anything that needs to be moved.

The versatile TURK can even be used to transport casualties. Back boards and collapsible stretchers are easily secured to the TURK. Patients can be moved from the triage area to a transport vehicle by a single person, freeing up skilled resources for other rescue operations.

The TURK features:

- > Small and foldable allowing easy storage
- > Easy to manoeuvre in different terrains
- > Small enough to navigate through most doorways, stairs and escalators
- > Decontaminable

## TURK Trolley Dimensions

<b>Weight:</b>	19.5kg
<b>Weight capacity:</b>	272kg
<b>Height:</b>	1220mm
<b>Overall width:</b>	686mm
<b>Inside cradle width:</b>	635mm
<b>Collapsed dimensions:</b>	381mm by 889mm
<b>Tires:</b>	381mm foam filled 'No Flat' type
