

We're here to **show** you a  
better time.

# Up to 50 times better, in fact.

Better times are here. Simplex proudly introduces Celestra™ 2000. The first Synchronized Time System display that is the most visible, reliable time system yet.

## **We improved everything.**

Our Celestra 2000 eliminates the problems found in even the latest digital systems.

We replaced small hard-to-read numerals with the brightest new LED's available. These new LED's, available as 2.5-inch-high numerals, are crisp and readable from greater distances. We also provided a dimmer in case the display is too bright in certain ambient light conditions.

## **A new benchmark for reliability.**

We dramatically improved reliability with proven center-wafer LED technology, simplified the design with fewer connections to go wrong, and built it all on a modular basis.

The result: Celestra is up to 50 times more reliable than any digital time system today.

## **The most accurate system yet.**

Never again will it be 3:14 in the office; 3:16 in the corridors; 3:10 in the conference room. The days of different time zones in the same facility are done.

In fact this is such an advanced time system, it can deliver accuracy to

one tenth of a second per year by synchronizing to atomic time standards such as NIST or GPS.

## **Better times can be yours.**

Your Simplex Representative can offer you optional display colors: red, green or amber; 2.5 or 4-inch display; attractive pricing on quantities; and a clean space-saving design.

Fold this panel over and place our actual size time display at a suitable height. You'll see that better times are here for your entire organization.

Your Simplex Representative can prove it to you. In no time.
