

Portable fire equipment - Your first line of defence

A functioning and accessible fire extinguisher or fire hose reel in competent hands, can mean the difference between an easily contained minor incident and a full scale fire with all its associated damage and disruption.

A vital part of Wormald's business is 'first-aid' fire fighting equipment – appliances such as portable fire extinguishers, fire hose reels and fire blankets that form the first line of defence against a fire. Wormald's team of fire equipment technicians, the largest in Australasia, is ready and able to meet all clients' needs from site assessment to hands on training. Thanks to our significant number of locations in metro and regional areas we can assist in the protection of virtually any industrial, commercial or residential property.

Our widespread presence also means that you are just a phone call away from an obligation free survey of your property. Let us conduct a comprehensive audit of your site's compliance to Australian standards and Occupational, Health and Safety (OH&S) requirements in portable fire protection. Our report will include recommendations and highlight any possible deficiencies that you may have in your existing fire protection equipment on site.

With over 120 years in the fire industry, Wormald has a wealth of knowledge of what portable fire apparatus will best protect assets and conform to building regulations and Australian standards.

Portable fire protection equipment – assistance when and where you need it.

We offer a wide range of:

- > Fire extinguishers
- > Fire hose reels
- > Fire blankets
- > Lay flat fire hoses
- > Fire hydrants and associated equipment
- > Signage
- > Decontamination and spill equipment
- > Life safety equipment
- > Fire suppression systems.

Wormald has also introduced the X-fire II, a mobile business initiative that delivers faster, simpler and more reliable solutions for our mobile technicians and back office staff. The X-fire II is designed to provide accurate and timely reporting for maintenance of your fire equipment via a wireless network.

The easy to use hand held computer helps to increase efficiency of record keeping and aims to decrease the time it takes to process data. The device allows for testing of fire equipment through collecting, disseminating and processing data.

Portable fire equipment needs to be identifiable, easy to get hold of and appropriate for the property it is intended to protect. But good fire protection is about more than just having the right devices in the right places. Portable equipment requires rigorous regular servicing. To comply with

building and insurance requirements, equipment should be serviced at regular intervals in prescribed ways. For example, extinguishers need to be pressure tested and fire hose reels checked for leaks, water pressure levels and general condition. We conduct stringent checks on portable equipment every six months in accordance with recommended Australian standards.

As essential as the right equipment in good working order, is the need for people with the confidence and ability to use it correctly and safely. Did you know that a watertype extinguisher used on an electrical sourced fire is potentially life threatening? Wormald is a Registered Training Organisation (RTO) whose certified trainers have instructed people from an extensive range of workplaces and residences in the use of portable fire equipment. We conduct equipment training on your premises using audiovisuals, assessments, course notes and hands on training to make employees proficient in handling a range of extinguishers. Our unique, mobile 'gas fire tray' simulators enable trainees to extinguish real fires in a safe, controlled environment.

We are proud of our ability to address all our clients' fire protection needs through our technical expertise, our vigilant service and our effective training programs. We'd welcome the opportunity to work with you.

Fact: All fire extinguishers and fire hose reels should be serviced every six months in accordance with AS 1851-2005.
